1 Introduction

This is an application to browse and evaluate university courses, called **Student-Evaluation**. The application is developed to allow students (users) to view all the courses of a specific university with related comments.

Looking the table on the right side, a user can browse all subjects and by clicking an element of this table, on the left section, the user can see more information about the chosen element: general information and comments.

In order to filter the list of subjects, there is a choice box, thanks to which the user can select a specific degree course.

In order to leave a comment, it is necessary to log in, otherwise, the application will allow interaction in read-only.

There are two buttons in the bottom left corner to allow students to update or delete their comments. There is no form to register into the application, it is assumed that users are already registered into the system, but there is an administrator that can add, update and delete subjects and all the informations related.

The mockup shows a web application interface with the following components:

- Login Section:** A box at the top containing "Username" and "Password" labels, each followed by a text input field, and a "Login" button to the right.
- Filtering Section:** Two dropdown menus labeled "Prof" and "Degree" are positioned above a large list container.
- Left Panel:** A vertical stack of four boxes. The top box is labeled "Course / prof informations". The following three boxes are each labeled "Comment".
- Right Panel:** A large container for a list of items, showing "List element 1", "List element 2", and an ellipsis "..." below them.
- Bottom Section:** A horizontal row containing a text input field labeled "Leave comment ..." on the left, and three buttons labeled "Comment", "Delete", and "Update" on the right.

Figure 1: Mockup

2 Analysis and workflow

2.1 Requirements

2.1.1 Functional requirements

The system has to allow the guest to carry out basic functions such as:

- To select a course from the list and view information and comments.
- To select a degree course from the list, filtering subjects.

In addition to the guest functions, the system has to allow the user to carry out basic functions such as:

- To login to the system.
- To upload comments on a course.
- To update a comment of a course only if the user is the owner.
- To delete a comment of a course only if the user is the owner.

The system has to allow the administrator to carry out basic functions such as:

- To login to the system.
- To add a course.
- To update a course.
- To delete a course.
- To associate a professor to a course.
- To delete any comment.

2.1.2 Non-functional requirements

- Usability, ease of use and intuitiveness of the application by the user.
- Availability, with the service guaranteed 24/7.
- The system should support simultaneous users.
- The system should provide access to the database with a few seconds of latency.

2.2 Use cases

Actors

- Guest : this actor represents a user who is not logged into the system
- Student : this actor represents a user who is logged into the system
- Admin : this actor represents the administrator of the system

2.2.1 Use Cases Description

Event	UseCase	Actor(s)	Description
Log in, Log out	Login, Logout	Admin, Student	The user logs in/out the application. The system browses the professors' list by the degree course of the logged user and returns it on the interface.
View all the subjects	Browse, Find, View P/S	User	The user chooses that he wants to view the list of all subjects. The system browses the data on the db and returns them on the interface.
View the comments and information of a subject	Browse, Find, View C	User	The user clicks on a record of the subject table. The system browses on the db the comments related to that subject and returns them on the interface.
Add a comment	Add C	Admin, Student	The user submits the text of his comment. The system updates the db and the interface.
Update a comment	Update C	Admin, Student	The user selects the comment and commits the new text. The system updates the db and the interface.
Delete a comment	Delete C	Admin, Student	The user selects the comment and submits the delete. The system updates the db and the interface.
View the subjects by degree	Browse, Find, View P/S	User	The user selects from the choice-boxes the degree course and the list (subjects) he's interested in. The system browses on the db the subjects filtered by the chosen degree and returns them on the interface.
Add a subject	Add P/S	Admin	The user submits the name and other information of the new subject. The system updates the db and the interface.
Update a subject	Update P/S	Admin	The user selects the subject and commits the new information. The system updates the db and the interface.
Delete a subject	Delete P/S	Admin	The user selects the subject and submits the delete. The system updates the db and the interface.

Figure 2: Use cases diagram

2.3 Analysis of entities

This diagram represent the main entities of the application and the relations between them.

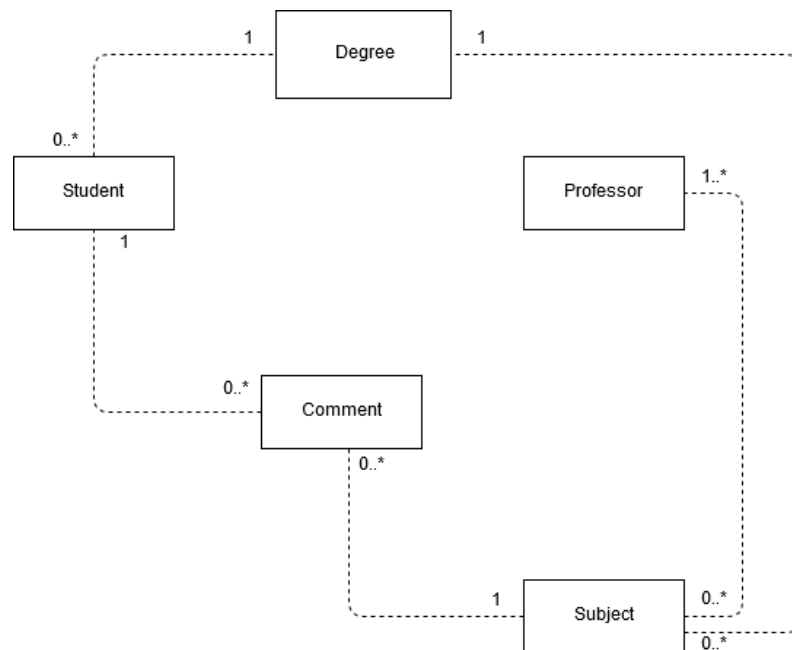

Figure 3: UML analysis diagram

3 Design

3.1 Database Choice

This application is based on many join operations between the entities, in order to obtain each professor associated with a subject, or each comment associated with a subject, or yet display all the subjects associated with a degree course. For this reason, if the amount of data available is very high as expected, a relational database will be computationally expensive. Then the choice fell on a graph database, which manage to work very well and very fast on a model made with a lot of entities and relations.

3.2 Software Architecture

The application is designed over 2 different layers, see figure 4:

- Front-end
- Back-end

5 User Manual

When you first run the application, the interface you get is the one in figure 5.

The interface is titled "Students Evaluations". It features a login section with "Username:" and "Password:" labels, each followed by a text input field, and a "Login" button. Below the login section is a placeholder box with the text "Informations about Professors are visualized here". To the right of this placeholder is a table with three columns: "ID", "NAME", and "SURNAME". The table contains 12 rows of data, with the first 6 rows populated and the last 6 rows empty. Below the table is a comment section with a text input field labeled "Leave a comment here..." and three buttons: "Comment", "Delete", and "Update".

8	Alessandro	Paoli
6	Giovanni	Stea

Figure 5: First view of the application

The default display includes the list of all registered professors in the table on the right. You can choose to display the professors of a single degree course, using the drop-down menu on the right (fig. 6), or decide to view the list of subjects (fig. 7), for which is also available the degree course's filter.

The interface is the same as in Figure 5, but the "Professors" drop-down menu is now set to "Ingegneria Informatica". The table on the right now only displays 6 rows of data, corresponding to the professors associated with this degree course.

If you now want to be able to see the comments associated with a particular professor, you have to click on the name of the professor: in the table on the left the list of comments already received will appear (fig. 9). With this operation, you'll be able to visualize also the information related to that professor.

To leave a comment, you need to enter the text in the field below the table and then click on the "Comment" button. The result obtained from these operations is shown in fig. 10.

You can also decide to modify the comment you just uploaded or another comment you made on a previous session. To do so, you need to click on the comment you want to update, change

5.1 Admin Manual

If you have an admin user, you are entitled to make changes both on the professors' and the subjects' lists. You need to log in inserting your username and password, and the application will recognize you as the administrator and show up the buttons for modifying the data (fig. 12).

The screenshot shows the 'Students Evaluations' application interface. At the top, it says 'User: Geghi' with a 'Logout' button. Below this, there's a sidebar on the left with a placeholder for 'Informations about Professors' and a table with columns 'Text' and 'Date'. The main content area on the right shows a table of professors with columns 'ID', 'NAME', and 'SURNAME'. The table contains one row with ID 5, Name Francesco, and Surname Marcelloni. Below the table are 'Edit' and 'Delete' buttons. At the bottom, there's a form to add a new professor with fields for 'Name', 'Surname', and 'Professor Informations', an 'Add' button, and a comment field.

ID	NAME	SURNAME
5	Francesco	Marcelloni

Figure 12: Interface after the administrator has logged in

You can choose to add a new professor, using the input fields at the bottom left. You have to specify the name, surname, and description, then press the "Add" button (fig. 13).

The screenshot shows the same interface as Figure 12, but with the 'Add' button highlighted. The 'Professor Informations' field is filled with the text: 'Professore Associato presso il Dipartimento di Ingegneria dell'Informazione Settore scientifico disciplinare: Sistemi di Elaborazione delle'. The table of professors is also visible, showing a list of professors with their IDs, names, and surnames.

6	Giovanni	Stea

Figure 13: Adding a new professor

You can also modify the data related to a professor: click on the professor you are interested in and change the information shown in the apposite input fields. Finally, you have the chance to delete a professor by clicking on the "Delete" button after selecting the wanted professor (fig. 14).

Figure 14: Screen of the application's interface from which you can either update or delete a professor

All these operations are available for the subjects as well. The only difference is that when you want to add a new subject you also need to specify the id of the professor teaching it (or a list of ids, separated by commas, if there are more professors teaching it). Moreover, you must have precisely displayed in the table the subjects of the same degree course of the new one (fig. 15).

Students Evaluations

User: Geghi Logout

Students will acquire accuracy and precision in the design and resolution of problems related to the design of non-relational databases.
Students will be able to collaborate with their colleagues and do teamwork effectively.
